

LATITUDE

Business Software for Land Surveyors, Engineers & Consultants
www.LatiBiz.com

Latitude is a comprehensive business management package designed for land surveyors, engineers, urban designers and other organisations that need to track professional work on projects and manage projects and project information. Latitude facilitates project costing, quoting, project workflow, staff time tracking, document control, client interaction, project team, prospect and supplier tracking, and billing.

Latitude notifies staff when work is to be done, allows project managers to see that they are doing it and then, when they are finished, automatically prompts the next person in a workflow at the right time to perform their role in completing a task.

Latitude tracks all time spent by your staff on all of their work, whether in the office or in the field. It takes the guesswork out of quoting and billing, allowing you to focus on the most profitable projects, clients and employees.

Latitude has a powerful document and communication register that can be used to log and then track everything from the original verbal client request, through draft file and document version control, to the final delivery of plans and reports to the client. This can form the core of a QA system.

Business Benefits

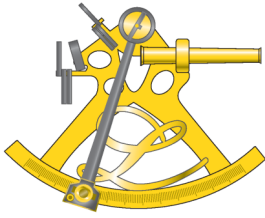

- ❖ Accurately cost jobs
- ❖ Streamline project workflow through the office, out & back from site, to customer report delivery & accounts
- ❖ Bill often 'missed' time
- ❖ Track client & prospect contacts
- ❖ Manage documents and files
- ❖ Track all client requests, instructions, communications and deliverables
- ❖ Time saved in project administration on billable work results in extra income
- ❖ Save time handling timesheets and registering documents thus reducing business costs
- ❖ Set budgets and warn staff or even prevent them from going over a hard maximum budget
- ❖ Measure client, project, employee and service profitability
- ❖ Avoid unprofitable clients and projects
- ❖ Obtain timely, accurate and relevant management reports
- ❖ Provide employees with project information at their fingertips on almost any device no matter where they are in the office or field
- ❖ You can use your true cost of business from Latitude to adjust your rates
- ❖ Latitude reporting gives you better information that leads to more accurate quoting
- ❖ Project managers have a detailed up to the minute view of all their projects

History

Since the 1990's Latitude has evolved to solve the problems surveyors, engineers & consultants have in running and controlling their businesses. It has been regularly refined and is now in use by thousands of land surveyors, civil & structural engineers, urban designers, architects, consultants, and project managers in both business and government.

The Latitude business also grew, and now provides a full range of installation, configuration, data migration, consulting, customization, project management, training and support services.

Special features added based on customer feedback include site latitude & longitude, township grid, plan register, aerial photo register, equipment barcodes and employee emergency contact details.

Latitude Productivity Report - 1 of over 200 inbuilt reports

What some of our clients say about Latitude...

All our staff use Latitude Software on a daily basis to link jobs to clients, job managers etc., as well as a comprehensive means for Job Managers to account for time spent on jobs for billing purposes. Any staff member can readily see the progress status of jobs.

Edrick Delfos - Hille Thompson & Delfos

Since its implementation in 2007, Latitude has proven to be an invaluable project management tool for our business. The intuitive menu structure made it easy for our users to navigate to key functions; while the powerful reporting options added real value to our business from a very early stage.

Andrew Chittenden - Tomkinson & Associates

Latitude support is always quick and ready to fulfil any request for changes, something we don't get from other software vendors.

Andrew Edwards - McKinlay Morgan & Associates

Latitude has increased our bottom line, and for time billing I have not seen anything better.

John Henley - Civil Surveys & Design

Latitude minimises administrative overhead in a small firm.

Terry Cromer - Terry Cromer Surveying

It is very useful for job costing and profitability analysis.

Kevin Dodd - Earl James & Associates

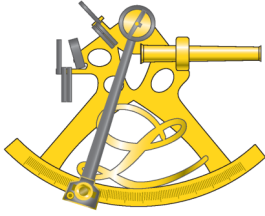

Software to automate and control your business

workflow - timesheet - project cost - document control - reporting
